Generative AI vs. Traditional AI

Prompt Engineering: How to Talk to the AIs

Kirill Ivanov

Senior Frontend Developer | React, TypeScript, Next.js | Fintech & Data Visualization

Bratislava, Slovakia

Summary

Senior Frontend Developer with 10 years of experience, currently building data-heavy interfaces for a global asset manager (React, TypeScript, Highcharts, Next.js).I specialize in financial UIs - interactive charts, fund pages, performance dashboards - where correctness, accessibility and rendering performance matter more than visual gloss. Comfortable across the modern React ecosystem and legacy stacks (jQuery, Razor, Episerver/Optimizely CMS), which lets me ship features in real-world enterprise codebases rather than greenfield demos.Recent work: https://www.vaneck.comOpen to senior frontend roles - remote within EU or Bratislava-based. Particularly interested in fintech, data visualization, and product companies with a strong engineering culture.

Experience

First Line Software

Frontend Engineer

December 2021 - Present (4 years 6 months)

Bratislava, Slovakia

Frontend Engineer at First Line Software, embedded with enterprise clients to build and modernize their public-facing web platforms. Across all engagements I've worked deep in the Optimizely (formerly Episerver) CMS ecosystem, bridging modern frontend stacks with established .NET/Razor backends.
VanEck — current engagement. Global asset manager with ~$199B AUM. Part of an embedded engineering team building the investor-facing platform and fund pages.

Develop and maintain interactive financial visualizations on Highcharts — performance history, growth-of-10K, calendar returns, sector weightings, holdings breakdowns — used across hundreds of fund pages.
Build React/TypeScript components on top of Optimizely CMS and ASP.NET Core MVC, integrating modern frontend patterns into the existing Razor-based stack.

Optimize mobile performance (Lighthouse audits, JS bundle splitting, render-path improvements) on globally-served pages.
Implement responsive layouts and shared UI primitives in SCSS + Bootstrap; refactor legacy jQuery where it intersects with new React features.

MyEvergreenWholesale.com. B2B wholesale e-commerce platform.

Rebuilt the entire product catalog from the ground up on React + Optimizely, replacing the legacy implementation.
Designed and shipped catalog UI, filtering, search and product detail flows.

ConvaTec.com. Global medical products company.

Contributed to a full website redesign built on Web Components + Optimizely, before the team's broader shift to React.
Implemented frontend components and integrated them into the CMS-driven content model.

Stack: React, TypeScript, Next.js, Highcharts, Web Components, SCSS, Bootstrap, jQuery, Optimizely / Episerver CMS, ASP.NET Core MVC, Razor.

Фотосклад.ру
Frontend Engineer
May 2020 - December 2021 (1 year 8 months)
St Petersburg City, Russia

Led the frontend redesign of Fotosklad.ru, one of Russia's largest photo and electronics e-commerce platforms, migrating the customer-facing site from a legacy stack to a modern React/Next.js architecture.
Key contributions:

Rebuilt the site end-to-end on Next.js with SSR for SEO-critical pages (catalog, product, search), replacing the previous server-rendered templates.
Designed and implemented the data layer on Apollo Client + GraphQL, collaborating with backend on schema design and query optimization.
Built reusable component library covering catalog, filters, cart, checkout and account flows; enforced consistency via TypeScript and Storybook.
Optimized Core Web Vitals on key landing and product pages - improved LCP and CLS to pass thresholds, which directly impacted organic search performance.

Worked closely with designers and product to ship the redesign in iterative releases without freezing feature delivery.

Stack: React, Next.js, TypeScript, GraphQL (Apollo), SCSS.

romb.ua
Freelance Software Engineer
October 2019 - May 2020 (8 months)
Russia

Freelance frontend engagement with romb.ua, a e-commerce site specializing in agricultural machinery and equipment.

Implemented and maintained frontend features on top of their Magento-based storefront - catalog, product pages, search and category filtering.
Built custom theme components and adjusted templates to match design requirements within Magento's frontend architecture.
Worked independently on scoped tasks, coordinating directly with the client on priorities and delivery.

Stack: JavaScript, jQuery, SASS, Magento (frontend layer).

Mygento eCommerce Solutions
Frontend Developer
February 2016 - November 2019 (3 years 10 months)

Frontend developer at Mygento, a Magento-focused e-commerce agency. Delivered frontend work across 7-8 client projects over nearly 4 years, working with both Magento 1 and Magento 2 codebases including migration projects between the two.

Developed and maintained customer-facing storefronts for retail clients: catalog, product, cart, checkout and account flows.
Built custom Magento themes and frontend modules on both Magento 1 and Magento 2, adapting to each platform's templating layer (PHTML, Knockout.js for M2).
Contributed to Magento 1 → Magento 2 migration projects, rebuilding theme layers and frontend components on the new platform.
Integrated storefronts with payment gateways, shipping providers, analytics and marketing tools per client requirements.
Switched contexts frequently across parallel client projects, picking up each codebase quickly and shipping features under agency timelines.

Collaborated with backend (PHP/Magento) developers, designers and project managers in a multi-project agency environment.

Stack: PHP (Magento templating), JavaScript, jQuery, Knockout.js (Magento 2), SASS, HTML5.
